

## PROCEDURE FOR FILLINGS AND CROWNS CHECK LIST

### STEPS TO BE COMPLETED BEFORE THE PATIENT ARRIVES:

- If a crown is being done bring the scanner into the room. If only fillings are being done skip to patient note section!
- Set up patient in scanner database. (Patient number is the Dentrix patient number found next to the patient's name on their chart.)
- Check to make sure that water is FULL!

### AFTER THE PATIENT ARRIVES:

- While the patient is being brought to the back, introduce yourself and check to make sure you have the route sheet!
- Once seated confirm the procedure to be performed with the patient.
- Place the blood pressure cuff and hand them consent forms explaining what each form is for.
- Take the patients blood pressure.
- While blood pressure is being taken get shade.
- After shade has been taken, place topical. Make sure CONSENT is SIGNED!
- After topical has been placed take impression for temporary.
- Enter shade into scanner while impression material is setting.
- Make sure doctor has everything he needs to complete procedure.
  - Handpiece.
  - Bur Block.
  - Basic setup.
  - Build up material if a crown is being done.
  - Composite for fillings
  - Garrison Matrix, matrix bands, and wedges class 2 filling
  - Hemodent and cord for both crowns and fillings
  - For crowns and onlays, materials to make temporary
- Enter pre-made procedure note into computer. For fillings make sure to enter all teeth to be worked on.
- Enter tooth numbers and Surfaces!
- For Crowns, make sure the REASON for crown being done is entered.
- For Crowns, make sure the original crown's placement date is entered if we are replacing a preexisting crown!
